# Sales KPI Framework

Business Owner, Sales Director, Account Executive, and SDR

This framework separates accountability across four layers of the sales organization. The owner measures growth. The director measures predictability. The account executive measures what happens in and after the meeting. The SDR measures meeting generation and early funnel efficiency.

## Business Owner

### 1. Closed Revenue

**Definition** Total new revenue won in the period.

#### Supporting KPIs

- Revenue versus goal
- Revenue by month
- Revenue by service line
- Average deal size
- Deals closed

**Why it matters** This is the clearest business growth signal. It tells the owner whether the company is actually bringing in enough new dollars.

### 2. Gross Margin on New Sales

**Definition** Gross margin dollars or gross margin percent on newly closed business.

#### Supporting KPIs

- Discount rate
- Cost to deliver by service line
- Average gross margin per deal
- Low margin deal count
- Revenue by service line

**Why it matters** Growth without margin can create bad revenue. The owner needs to know whether new sales are profitable.

### 3. Revenue Growth Rate

**Definition** The percent increase or decrease in new revenue over a set period.

#### Supporting KPIs

- Month over month revenue growth
- Quarter over quarter revenue growth
- Year over year revenue growth

- 
- New customer count
  - Average deal size trend
  - Revenue by source trend

**Why it matters** The owner is not just looking at one period in isolation. They need to know whether the business is actually growing over time.

## Sales Director

### 1. Pipeline Coverage Ratio

**Definition** Qualified pipeline value divided by revenue target.

**Supporting KPIs**

- Qualified pipeline value
- Revenue target
- Qualified opportunity count
- Average opportunity value
- Pipeline by stage
- New qualified pipeline created

**Why it matters** This tells the director whether the team has enough real pipeline to support the revenue target.

### 2. Pipeline Velocity

**Definition** The rate at which qualified pipeline turns into revenue.

**Supporting KPIs**

- Qualified opportunity count
- Win rate
- Average deal size
- Average sales cycle length
- Stage aging
- Stage conversion rates

**Why it matters** This tells the director whether deals are moving through the funnel fast enough to produce predictable results.

### 3. Lead to Close Rate

**Definition** Total closed deals divided by total leads received times 100.

**Supporting KPIs**

- Total leads received
- Total closed deals
- Lead to meeting conversion rate

- 
- Meeting to opportunity conversion rate
  - Opportunity to proposal conversion rate
  - Proposal to close rate
  - No show rate
  - Lead response time
  - Lead source conversion rate

**Why it matters** This is the broadest efficiency metric in the funnel. It shows how much raw demand the sales engine turns into actual customers.

## Account Executive

### 1. Meeting to Opportunity Conversion Rate

**Definition** The percent of held first meetings that become qualified opportunities.

#### Supporting KPIs

- Held meetings
- Qualified opportunities created
- No show recovery rate
- Qualification rate by source
- Follow up speed after meeting

**Why it matters** This tells you whether the account executive is turning meetings into real pipeline instead of just having conversations.

### 2. Opportunity to Proposal Conversion Rate

**Definition** The percent of qualified opportunities that advance to proposal.

#### Supporting KPIs

- Qualified opportunities worked
- Proposals sent
- Proposal turnaround time
- Stage aging in opportunity stage
- Loss rate before proposal
- Objection rate before proposal

**Why it matters** This measures whether the account executive can control the middle of the funnel and move real deals forward.

### 3. Proposal to Close Rate

**Definition** The percent of proposals sent that become closed won deals.

#### Supporting KPIs

- 
- Proposals sent
  - Closed won deals
  - Average days from proposal to close
  - Discount rate
  - Loss reasons after proposal
  - Follow up attempts after proposal

**Why it matters** This tells you whether the account executive can close the opportunities they advanced. It is the clearest late stage account executive performance KPI.

## SDR

### 1. Meetings Set

**Definition** Total number of meetings booked for account executives in the period.

#### Supporting KPIs

- Outbound touches
- Connect rate
- Positive reply rate
- Meetings set by source
- Meetings set by campaign
- Meetings set per SDR

**Why it matters** This is the clearest output of the SDR role. Their main job is to create meetings.

### 2. Meeting Show Rate

**Definition** The percent of booked meetings that are actually held.

#### Supporting KPIs

- Meetings booked
- Meetings held
- No show count
- Reminder completion rate
- Reschedule rate
- Time from booking to meeting date

**Why it matters** A booked meeting that never happens has limited value. This tells you whether the SDR is setting meetings that actually occur.

### 3. Lead to Meeting Conversion Rate

**Definition** The percent of worked leads that convert into booked meetings.

#### Supporting KPIs

- 
- Leads worked
  - Meetings booked
  - Connect rate
  - Reply rate
  - Call to connect rate
  - Email to reply rate
  - Sequence completion rate

**Why it matters** This measures how efficiently the SDR turns raw leads into booked conversations.
