Setting Up Your CRM

Track leads, sales, and customers in one place.

Basic Website Setup

Domain, homepage, and clear call to action.

Business Email & Communication Tools

Staying organized and professional.

Payments & Invoicing Tools

Make getting paid simple for everyone.

Data Backup & Simple Security

Protecting your business from basic risks.

Chapter 1

Setting Up Your CRM

Track leads, sales, and customers
in one place.

Track leads, sales, and customers in one place. This chapter clarifies what a CRM is, why it matters for small business revenue, and how to put a simple, high-signal system in place without overbuilding. The goal is clarity and consistency: one source of truth that prevents revenue leakage.

A CRM is just a place where you keep track of: Who contacted you, what they wanted, if they bought, if they didn't, and who your customers are.

That's it. It's not just for big companies. It's not optional once you want to grow. A CRM replaces sticky notes, texts, DMs, memory, and chaos with one source of truth.

- Who contacted you
- What they wanted
- If they bought
- If they didn't
- Who your customers are

If you don't track leads, you are leaking revenue and you don't even know it. Most small business owners forget to follow up, lose messages, miss calls, double book, forget who asked for what, and can't tell where sales come from.

Then they say: "Business is slow." No business is untracked.

A CRM doesn't make you money. It stops money from slipping through the cracks.

Example: A Pressure Washing Business

This business gets leads from website form, Facebook messages, texts, phone calls, and referrals. Before a CRM, everything lives in the owner's phone, in their head, and in random messages. After a CRM, every lead lives in one place. That difference is night and day.

- Website form
- Facebook messages
- Texts
- Phone calls
- Referrals

What a CRM Should Track (Beginner Level)

You only need to track five things to run a reliable pipeline. If your CRM does this, it's doing its job.

1. **Lead name**
2. **Contact info (phone/email)**
3. **What they want (driveway, house wash, patio, etc.)**
4. **Status: New lead, Quoted, Booked, Completed, Lost**
5. **Next step (call back, follow-up date, scheduled job)**

How a CRM Actually Helps

Without a CRM: Someone texts for a quote, you reply later, they go quiet, you forget, job never happens. With a CRM: Lead gets logged, quote is tracked, follow-up is scheduled, you reach out again, job gets booked. Same lead. Different outcome.

- Without a CRM: Someone texts for a quote → you reply later → they go quiet → you forget → job never happens.
- With a CRM: Lead gets logged → quote is tracked → follow-up is scheduled → you reach out again → job gets booked.

What to Put in Your CRM (Day One)

For a pressure washing business, every lead entry should look like this: Name: John Smith. Service: Driveway + walkway. Source: Website. Status: Quoted. Next step: Follow up Thursday. That's enough to run a real business. You do NOT need 50 fields, custom dashboards, or automations on day one. Simple beats perfect.

- Name: John Smith
- Service: Driveway + walkway
- Source: Website
- Status: Quoted
- Next step: Follow up Thursday

What NOT to Do

- Don't rely on memory
- Don't track leads in five places
- Don't wait until "later"
- Don't overbuild your CRM
- Don't skip follow-ups
- Don't treat CRM as admin work

CRM is revenue work. Treat it like a daily practice, not a task you'll get to someday. The system you follow will outperform the tool you wish you had.

Putting It All Together

Before CRM: "I think I followed up with everyone." After CRM: "I know exactly who needs a follow-up today." The pressure washing owner closes more jobs, misses fewer leads, feels organized, looks professional, and grows without chaos.

Same effort. Better system.

One-Sentence Summary

"A CRM doesn't add work. It stops revenue from slipping away."

Quick Recap

- CRM = one place for leads, sales, and customers
- Track name, contact, service, status, next step
- Memory is not a system
- Simple CRM beats no CRM
- Tracking leads is revenue protection

Basic Website Setup

Domain, homepage, and clear call to action.

Chapter 2

Domain, homepage, and clear call to action.

Your website has one job: Turn visitors into leads.

For a small business, a website is a lead machine. If someone lands on your site and doesn't know what you do, who it's for, and how to contact you, your website is failing. This chapter shows how to build simple pages that convert.

Your website has one job: Turn visitors into leads. **That's it. A website is not a brochure, a resume, a brand essay, or a place to show everything you've ever done.** It exists to generate inbound conversations you can close.

Why This Matters

Most small business websites look nice but don't make money. They talk about themselves, use vague language, hide contact info, have no clear next step, and confuse visitors. And confused visitors leave. A website that doesn't convert is just an expense. A website that converts is an asset.

Example: A Local Plumbing Business

A plumber's customers are usually in a hurry, frustrated, dealing with a problem, and ready to call someone NOW. They don't want long stories, fancy design, or clever wording. They want answers fast. That makes plumbing a perfect example for website basics.

The 3 Things Every Small Business Website Needs

1) A clear domain name. 2) A simple homepage that explains everything fast. 3) One clear call to action. When you build with these three pillars, visitors know they're in the right place and exactly what to do next.

1. A Clear Domain Name

Your domain should be easy to spell, easy to remember, and close to your business name. Good examples: CityNamePlumbing.com, SmithPlumbingTX.com. Bad examples: BestServices123.biz, FixItNowOnline.net. If people can't remember it, they won't come back.

2. A Simple Homepage That Explains Everything Fast

Your homepage should answer in 5 seconds: What do you do? Who is it for? What problem do you solve? What should I do next? Plumber example headline: "Fast, Reliable Plumbing for Homes in Austin." Subtext: "Leaks, clogs, water heaters — same-day service available." That's it. No fluff. No guessing.

3. One Clear Call to Action (CTA)

Your website should tell visitors exactly what to do next. Good CTAs: "Call Now," "Request a Quote," "Book an Appointment." Bad CTAs: "Learn More," "Explore," "Discover." Plumber CTA example: "Call Now for Same-Day Service." If there's no CTA, there's no conversion.

What a Good Website Does (Plumber Example)

A homeowner searches “plumber near me.” They click your site. They see what you do, where you work, how to contact you, and what problem you solve.

They don't think, they don't scroll forever, they don't hesitate. They call. That's a working website.

What NOT to Do

- Don't overload the site
- Don't hide phone number or form
- Don't use vague language
- Don't make it about you
- Don't add pages you don't need
- Don't delay launching “until it's perfect”

A simple live website beats a perfect website that doesn't exist. Ship, learn, iterate, and let results guide refinements instead of perfectionism.

Putting It All Together

The plumber builds a one-page website with a clear headline, simple service list, phone number at the top, and a “Call Now” button. Result: More calls, less explanation on the phone, better leads, higher close rate. The website doesn’t impress designers. It prints money quietly.

Summary

“A good website doesn’t explain everything it tells people what to do next.”

Quick Recap

- Your website's job is lead generation
- Domain should be simple and clear
- Homepage must explain what you do fast
- One clear CTA beats many weak ones
- Simple converts better than fancy
- Launch fast and improve later

Your website is not your brand story. It’s your front door — the fastest path from problem to booked appointment.

Business Email & Communication Tools

Staying organized and professional.

Chapter 3

Staying organized and professional. Business communication is how you look professional, stay organized, respond faster, avoid confusion, and keep deals moving. This includes email, phone, text, scheduling, and internal notes. **You don't need fancy tools just clear, consistent communication that scales with your workload.**

Why This Matters

If your communication is messy, your revenue will be messy too.

When communication is sloppy, leads get ignored, customers get confused, appointments get missed, deals stall, and trust drops. People don't trust businesses that feel chaotic.

Professional communication doesn't mean corporate — it means clear, timely, and reliable.

Example: A Personal Training Business

A personal trainer talks to new leads asking questions, current clients booking sessions, past clients coming back, and referrals asking for info. If communication lives across personal email, personal phone, Instagram DMs, text messages, and notes in your head, things get missed fast. That's lost revenue.

The 3 Communication Tools You Actually Need

1. A Business Email Address

You need an email that looks like a business. Good examples: info@yourbusiness.com, hello@yourbusiness.com. Bad examples: yourname123@gmail.com, beasttrainer99@yahoo.com. This matters because it builds trust, looks legitimate, keeps business separate from personal, and scales as you grow. It's an easy win.

2. One Main Inbox for Leads & Customers

Pick one place where customer messages live: a business email, CRM inbox, or shared inbox tool. What matters is that you check it daily, nothing gets lost, and you can see past conversations. The goal is simple: No lead should ever ask, "Did you get my message?"

3. A Simple Scheduling Tool

Scheduling back-and-forth wastes time. **A scheduling tool shows availability**, lets clients book themselves, sends reminders, and reduces no-shows. For a personal trainer, "Book your session here." Done. Less texting. Less confusion. More sessions booked.

How This Works in Real Life (Trainer Example)

Before: Lead DMs on Instagram, trainer replies hours later, lead forgets, session never books. After: Lead clicks website, emails trainer, trainer replies same day, booking link sent, session scheduled. Same effort. Cleaner system. More money.

What NOT to Do

- Don't use personal email
- Don't juggle messages across platforms
- Don't rely on memory
- Don't delay replies
- Don't schedule manually forever
- Don't let communication feel random

Communication chaos kills trust. Centralize communication, standardize responses, and set a daily review habit so nothing falls through the cracks.

Putting It All Together

The trainer sets up business email, one main inbox, and a scheduling link. Now leads get fast replies, clients book easily, fewer missed sessions, more professional feel, and less stress. Communication becomes an asset, not a bottleneck.

Summary

“Clear communication builds trust and trust closes deals.”

Quick Recap

- Professional communication matters
- Use a business email
- Centralize messages
- Make scheduling easy
- Respond consistently
- Organization protects revenue

If people can reach you easily, they’re more likely to pay you. Make responsiveness your competitive advantage.

Payments & Invoicing Tools

Make getting paid simple for everyone.

Chapter 4

Make getting paid simple for everyone. Payments and invoicing tools are how you get paid, get paid faster, get paid correctly, and avoid awkward conversations. If customers want to pay you but it's confusing, slow, or annoying you will get paid later or not at all. Getting paid should be easy, clear, fast, and boring. Boring is good when it comes to money.

Why This Matters

If it's hard to pay you, people won't. Not because they don't want to but because friction kills action. Bad payment systems cause late payments, ghosting, "I forgot" excuses, awkward follow-ups, and cash flow problems. Good payment systems increase close rates, speed up cash flow, reduce stress, and make your business feel professional. You shouldn't have to chase money you already earned.

The easier it is to pay, the faster you get paid.

Example: A Mobile Dog Grooming Business

A dog groomer drives to clients' homes, provides a clear service, and charges per visit or package. Payments happen often, customers expect convenience, and late payments cause stress. This is a perfect example of how simple tools fix this.

The 3 Parts of a Simple Payment System

1. Clear Pricing Up Front

Before any work starts, the customer should know what they're paying, when they're paying, and how they're paying. Dog groomer example: "Full groom is \$85. Payment is due at time of service." No surprises. No confusion. No debates. Clarity prevents conflict.

2. One Easy Way to Pay

Pick one or two payment methods and stick to them. Good options: credit/debit card, online payment link, auto-pay for repeat clients. Avoid checks, IOUs, "I'll send it later," and too many options.

3. Simple Invoices or Receipts

Every payment should come with date, service, amount, and status (paid / unpaid). This protects you, the customer, your records, and your taxes. Invoices don't need to be fancy. They need to be clear.

How This Works in Real Life (Dog Groomer Example)

Before: Groomer finishes job, asks for payment, customer says "I'll send it later," groomer follows up, payment drags. After: Groomer sends invoice before appointment, card is charged at time of service, receipt is sent automatically. No chasing. No awkward texts. No stress.

What NOT to Do

- Don't wait days to invoice
- Don't accept "I'll pay later"
- Don't make pricing unclear
- Don't juggle payment apps
- Don't chase money emotionally

Payment problems are system problems not customer problems.

Define your payment policy, communicate it upfront, and automate where possible.

Putting It All Together

The dog groomer shares pricing up front, requires payment at service, uses one payment tool, and sends automatic receipts. Now cash flow improves, customers know the rules, fewer late payments, less stress, and the business feels real. Getting paid becomes routine — not a fight.

One-Sentence Summary

“

“If payment is easy and clear, money moves faster.”

Quick Recap

- Getting paid should be simple
- Set pricing expectations early
- Use easy payment tools
- Invoice immediately
- Avoid chasing money
- Systems protect your cash flow

You didn't start a business to beg for your own money. Standardize, simplify, and automate to turn revenue into routine.

Data Backup & Simple Security

Protecting your business from basic risks.

Chapter 5

Protecting your business from basic risks.

Data backup and security are about one thing: Not losing your business to a stupid, avoidable mistake.

Your data includes customer info, leads, invoices, photos/files, passwords, emails, and contracts. If it disappears, gets stolen, or gets locked — your business stalls or dies. You don't need enterprise security. You need basic protection that actually works.

Why This Matters

Most businesses don't fail from competition — they fail from preventable chaos. Common disasters: laptop dies, phone gets lost, files get deleted, email gets hacked, passwords get stolen, accounts get locked. And then owners say: "I thought it wouldn't happen to me." It always happens to someone usually to the people who didn't prepare. Simple systems prevent massive pain.

Example: A Photography Business

A photographer stores client photos, edited files, contracts, invoices, and booking info. If those files are lost, clients are furious, refunds happen, reputation is damaged, and income is lost. This is a perfect example of why backup and security are non-negotiable.

The 3 Things You Must Do to Stay Safe

1. Back Up Your Data Automatically

If you back things up manually, you won't do it. Beginner rule: Your data should back up automatically, every day. Examples include cloud storage (Google Drive, Dropbox, OneDrive), automatic phone photo backup, and automatic computer backup. For a photographer: photos save to computer, computer syncs to cloud, cloud keeps versions. If one thing fails, the others save you.

2. Use Strong, Unique Passwords

Using the same password everywhere is asking for trouble. Beginner rules: one password per tool, no birthdays or names, no reused passwords, and use a password manager. If one account gets hacked, everything else stays safe. Security isn't about being paranoid. It's about not being careless.

3. Turn On Two-Factor Authentication (2FA)

Two-factor authentication means password + phone code. Yes, it's annoying. No, it's not optional. For business tools — email, CRM, payment tools, and cloud storage — 2FA stops most hacks instantly.

How This Works in Real Life (Photographer Example)

Before: Photos live only on laptop, laptop crashes, files are gone, clients are furious, business reputation suffers. After: Photos auto-upload to cloud, laptop dies, files still exist, jobs continue, business survives. Same work. Different protection. Very different outcome.

What NOT to Do

- Don't rely on one device
- Don't skip backups
- Don't reuse passwords
- Don't ignore security emails
- Don't assume "I'm too small to be targeted"

Small businesses are targeted more, not less. Make resilience a default by automating backups, hardening logins, and rehearsing recovery steps.

Putting It All Together

The photographer sets up automatic cloud backups, unique passwords, a password manager, and two-factor authentication. Now files are safe, clients are protected, stress is lower, and mistakes don't end the business. Security becomes boring — and boring is exactly what you want.

One-Sentence Summary

“

“Backups and security don't grow revenue — they protect it.”

Quick Recap

- Your data is your business
- Back it up automatically
- Use strong, unique passwords
- Turn on two-factor authentication
- Simple protection prevents disasters
- Security is part of revenue operations

You worked too hard to lose everything to a dead laptop. Treat protection as a tiny daily tax that prevents catastrophic loss.

Simple Interpretation for Small Business Owners

Books 1–3 teach you how to *get customers*.

Books 4–5 teach you how to *keep customers*.

Books 6–8 teach you how to *run the business behind the scenes*.

Book 9 teaches you how to *lead the business like a CEO*.

PHASE 1 — FOUNDATIONS

What you sell, who you sell it to, and how people find you.

1. PRODUCT (Start Here)

Build something people want → understand problem, customer, offer, landscape, MVP.

Unlocks: Marketing + Sales effectiveness.

2. MARKETING

Now that you know your offer and customer → learn to generate leads.

Unlocks: Sales pipeline consistency.

3. SALES

Once leads are coming in → learn to convert them into revenue.

Unlocks: Customer Success workflows and financial predictability.

Why this phase matters:

You go from *"I have an idea"* → *"I can attract and close paying customers."*

PHASE 2 — DELIVERY SYSTEMS

How you turn customers into raving fans and repeat buyers.

4. CUSTOMER SUCCESS

Once sales convert customers → you learn to onboard, deliver, and retain.

Unlocks: Recurring revenue + testimonials + operational clarity.

5. OPERATIONS

Now you systematize the entire delivery engine: SOPs, checklists, templates, processes.

Unlocks: Quality control, scalability, and reduced chaos.

Why this phase matters:

You go from *"I can sell"* → *"I can consistently deliver and retain."*

PHASE 3 — BUSINESS INFRASTRUCTURE

Tools, numbers, and people who make the machine run.

6. TECHNOLOGY

Once operations are forming → you add the tools that support scale (CRM, website, email, payments).

Unlocks: Data visibility, automation, and speed.

7. HUMAN RESOURCES

Once delivery is predictable → you hire and train people to help.

Unlocks: Delegation, team growth, and freeing the founder.

8. FINANCE

Once business grows → you install financial basics (bank accounts, bookkeeping, cash flow, budget, taxes).

Unlocks: Correct pricing, healthy margins, and sustainable growth.

Why this phase matters:

You go from *"I do everything manually"* → *"My business has real systems and support."*

PHASE 4 — SCALING THE BUSINESS

You become the CEO instead of the operator.

9. GOVERNANCE

Once you have customers, systems, tools, finances, and a team → you implement the rhythms and standards that keep the business aligned.

Includes:

- Comp plans
- Cultural standards
- Planning rhythms
- Promotions/exits
- Decision-making framework

Unlocks:

- True leadership
- Predictable growth
- A business that runs without you

Why this phase matters:

You go from *"I built a business"* → *"I operate like a CEO."*
